Holds and lasts
Did you know that the textile floor mats from ŠKODA Genuine Accessories also undergo the so-called 'heel test'? This test simulates the action of the driver's foot on the accelerator, sinking the heel 5 mm into the floor mat in both dry and wet conditions at an angle of 45°. The floor mats also undergo an additional load test in the form of a long driving test, and further focus is placed on the brackets fixing the front floor mats to the car upholstery. The tests are designed to verify the proper clip strength needed to enable comfortable handling by the driver, while keeping the floor mat in place despite the occasional application of force during the drive.

TRANSPORT

TRANSPORT

Surely you have many plans with your family where to go, what to see and how to enjoy leisure time. Whether you go on a sports trip, shopping tour or just a weekend at the country, the CITIGO is ready to accompany you all the way. ŠKODA Genuine Accessories offer a simple solution in the form of products enabling you to transport sports equipment and other luggage outside the car's interior.

Simulation map of stress induced by roof rack tightening

The racks undergo a number of demanding tests. Their resistance to corrosion, loading capacity, strength and durability are tested in various conditions, as well as the subsequent water tightness of the car after their installation. During the so called City Crash test, a rack loaded with 90 kg must remain on the car body under a force of approximately 12 G lasting for 50 milliseconds (impact simulation).
